Summary

Software Engineer with strong foundation in object-oriented programming, system design, and application development. Experienced in Java, C, and Unity development with hands-on project experience.

Skills

- Languages: Java, C, C#
- Concepts: OOP (Encapsulation, Inheritance, Polymorphism)
- Tools: Unity, Git, VS Code
- Database: Basic SQL
- Others: Debugging, System Design

Projects

Virtual Money Management System (Java)

- Developed account transfer system without real banking integration
- Implemented interfaces and reporting system
- Applied OOP principles for modular design

Train Schedule System (C)

- Built scheduling logic and data handling system
- Focused on structured programming and input validation

Unity Zombie Game

- Implemented enemy spawning system
- Added gameplay mechanics like health system and game-over logic

Education

Diploma in Programming / Related Field
